ACTIVE SHOOTER

NEGOTIATION: CYBER INCIDENT

SIMTACTICS
EMERGENCY SIMULATION TRAINING

True Security Design provides a comprehensive approach to creating the safest possible environment for your organization and facility. Our live tabletop simulation services bring together modern technology and law enforcement experience to assess, educate and train schools and other organizations to be prepared for any crisis. With simulated crisis management exercises, you can put your current crisis plans to the test, and ensure there is a seamless and well-understood plan in place.

What is SIMTactics?

SIMTactics is a computerized crisis simulation software that helps organizations face potential disasters and deal with them in "simulated" real time – better preparing for the "real thing".

- Simulates decision-making scenarios focusing on real-life interactions
- Real-time analytics & insights to enhance your decision-making processes
- Compares real decision-making processes to anticipated ones
- Understand why players act like they do
- Improve procedures to be better prepared

Can you answer these questions?

- How would your school handle an active shooter or impending tornado?
- How would your police officers address a crowd control scenario?
- How would your hospital staff handle a pandemic response?
- How would your company address an active shooter or cyber-attack?
- How would your government agency address an environmental disaster?

SIMTactics training can help your organization be as safe as possible.

- Our platform can upload your current policy and create a graphic that shows your expected actions during an emergency.
- Next, your team engages in a dynamic simulation exercise such as an active shooter attack, weather emergency, cyber attack, or natural disaster.
- The exercise allows all of your team to respond to any emergency as they would in a real event based on your plan. They can communicate, make decisions, and overcome problems in real time, under stress.
- Using Artificial Intelligence (AI), the system reviews each person's actions and creates a set of analytics that allows you to find gaps in your plans and assess the performance of your team. Eliminate gaps, update your plans and prepare your staff to respond in the best possible way.

The SIMTactics training brings realism, stress, and timeline to your training unlike anything else.

Training Scenarios

New training topics are constantly being added - be on the lookout!

- Brand Threat
- Aviation Safety
- Smart City Terror Attack
- Competitive Intelligence
- Natural Disasters

- Money Laundering
- Business: Supplier Strike
- Mass Casualty Event
- Structural Collapse
- Data Breach

- Aviation Security
- Water Security
- Negotiation: Cyber Incident
- Negotiation: Internal Politics
- Active Shooter

- Business: New Competition
- Pandemic
- Major Public Event
